## PVT LTD

### Function:

O1

Supply and Installation, Maintenance of all types of electrical equipment likes, Single phase and Three , Phase transformers, Generators, Lifts, Solar equipment, line tools and lineman tools, Lightning arrestor, Insulator, all types of cable, industrial UPS, Sub-station Spare parts, HT Switchgear (VCB/LBS), LT Switchgear, Auto PFI Plant, Voltage Regulator.

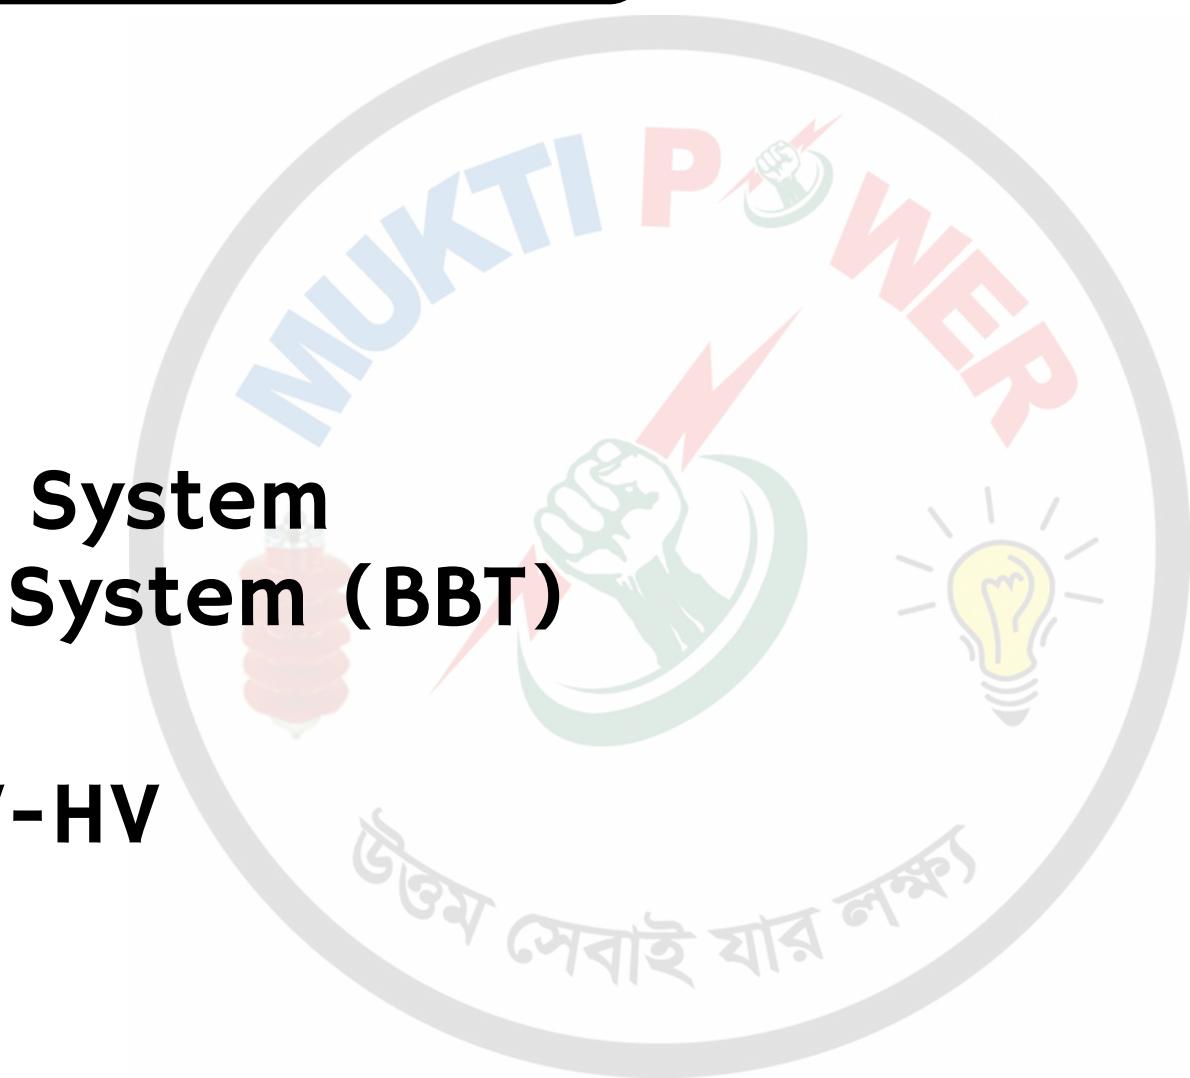

### Background and Introduction of Mukti Power Private Limited:

Mukti Power Private Ltd came into existence with the objective of ensuring safe power supply and self-employment by supplying quality equipment to the power sector of the country. For this purpose, some committed and experienced technical know-how has been laid for release by coordinating the entire management. It is an established fact that we are determined not to deviate from the standard of supply equipment as we seek to create employment. That is why we have established business relationships with European and Chinese high-quality companies from the very beginning. On the other hand, in order to establish communication with our employees from all parts of the country, the door will be open to everyone so that everyone can participate in the company. Our honesty, devotion and service mentality is the only way for us to go so that all the customers of the country as well as the power sector get better service.

**WE DEAL WITH TOTAL SOLUTION**

**Sub-Station  
Generator  
Solar  
Lift  
Pumps & Pumping System  
Bus-Bar Trunking System (BBT)  
Industrial AVR  
Switchgear LV-MV-HV  
Transformer  
Real Estate  
Fire Hydrant System**

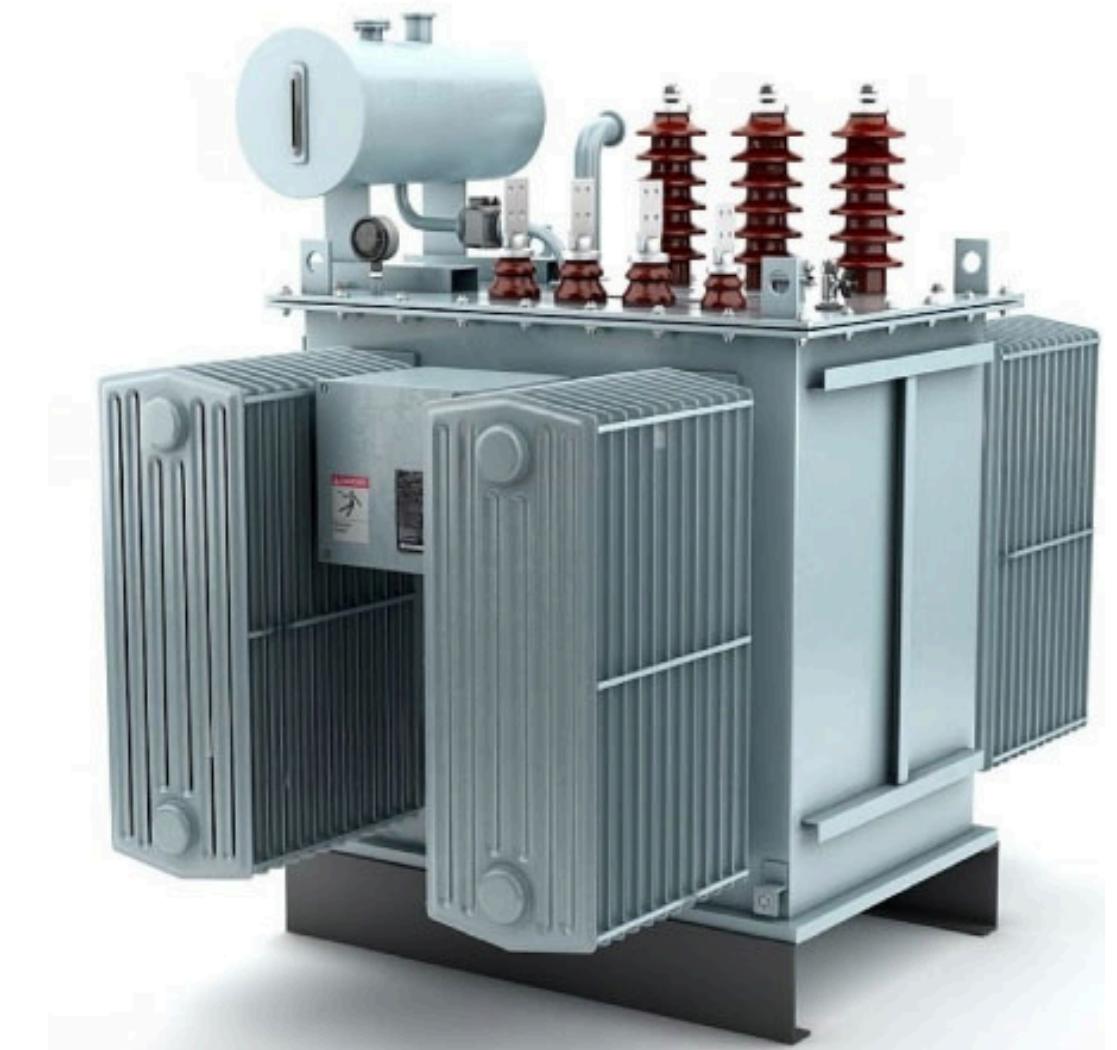

# Transformer

A best-quality three-phase power transformer is a highly efficient and reliable electrical device used for power transmission and distribution. It ensures a stable and balanced power supply, making it ideal for industrial plants, substations, and commercial applications.

Top-quality transformers feature high-grade copper or aluminum windings, low-loss core materials, and excellent insulation, reducing energy losses and enhancing efficiency. They are designed with advanced cooling systems (oil-immersed or air-cooled) to prevent overheating and ensure long-term durability.

The best transformers offer robust construction, superior voltage regulation, and protection mechanisms like overload and short-circuit protection. Regular maintenance, proper installation, and high-quality materials ensure long service life, safety, and optimal performance in demanding electrical networks, supporting reliable power distribution with minimal losses.

# Generator

A best-quality generator is a reliable and efficient power source designed to provide uninterrupted electricity during power outages or in remote locations. High-quality generators feature durable engines, fuel efficiency, low noise levels, and advanced safety features like overload protection and automatic shutdown.

These generators come in various types, including diesel, gasoline, natural gas, and inverter generators, catering to different power needs. Top brands ensure long-lasting performance with robust construction, efficient cooling systems, and digital monitoring for ease of use.

A best-quality generator provides stable voltage output, making it suitable for homes, businesses, hospitals, and industrial applications. Regular maintenance and proper usage extend its lifespan, ensuring a dependable backup power supply in critical situations.

# Solar

A best-quality solar panel and inverter system ensures efficient and reliable solar energy conversion for residential, commercial, and industrial applications. High-efficiency solar panels use monocrystalline or polycrystalline cells, offering maximum sunlight absorption and energy output. Durable panels with anti-reflective coatings and weather-resistant materials ensure long-lasting performance.

A high-quality inverter efficiently converts DC power from solar panels into AC power for household or commercial use. The best inverters feature MPPT (Maximum Power Point Tracking) technology, ensuring optimal power conversion even in varying sunlight conditions. Reliable brands offer overload protection, remote monitoring, and long lifespans.

Choosing premium solar panels and inverters guarantees higher energy savings, reduced electricity bills, and an eco-friendly power solution with minimal maintenance.

# Lift (Elevator)

A best-quality lift (elevator) ensures smooth, safe, and efficient vertical transportation in residential, commercial, and industrial buildings. High-quality lifts feature advanced motor technology, durable materials, and precision engineering, providing fast and quiet operation.

Top brands use energy-efficient systems, such as gearless traction motors and regenerative drives, reducing power consumption. Safety features like overload protection, emergency brakes, automatic rescue devices (ARD), and smooth door operations ensure passenger security.

Premium lifts have modern designs, user-friendly controls, and smart automation, including touchless operation and remote monitoring. Whether for passenger, freight, or hospital use, a high-quality lift offers reliable performance, minimal maintenance, and long service life, making it an essential part of modern infrastructure.

## Pumps & Pumping System:

A best-quality pump and pumping system ensures efficient, reliable, and durable fluid transfer for residential, commercial, and industrial applications. With energy-efficient motors, corrosion-resistant materials, and advanced technology, they provide high performance, minimal maintenance, and long service life, ensuring smooth and consistent operation.

## Pumps & Pumping System:

## Bus-Bar Trunking System (BBT)

A best-quality Bus-Bar Trunking System (BBT) ensures efficient, safe, and reliable power distribution in industrial, commercial, and residential buildings. Featuring high conductivity, fire-resistant insulation, and compact design, it provides low power loss, easy installation, and long-term durability for seamless electrical transmission.

## Bus-Bar Trunking System (BBT)

## Industrial AVR

A best-quality Industrial Automatic Voltage Regulator (AVR) ensures stable and reliable voltage regulation for industrial equipment. With high efficiency, durable components, and advanced protection features, it prevents voltage fluctuations, enhances equipment lifespan, and ensures uninterrupted power supply for smooth industrial operations.

Industrial AVR

## Switchgear

A best-quality switchgear ensures safe, reliable, and efficient power control in industrial and commercial settings. With high-quality insulation, durable components, and advanced protection features, it provides circuit protection, fault isolation, and seamless power distribution, ensuring operational safety and system longevity.

Switchgear

## Real Estate

Best-quality real estate offers premium construction, prime locations, and modern amenities, ensuring comfort, security, and long-term value. With superior architecture, sustainable designs, and high-end materials, it provides luxurious, efficient, and well-planned spaces for residential, commercial, and industrial purposes.

## Real Estate

## Fire Hydrant System

A best-quality fire hydrant system ensures efficient, reliable, and rapid fire protection in emergencies. With high-pressure water flow, durable pipes, and advanced safety features, it provides effective firefighting capabilities, safeguarding lives, property, and infrastructure in residential, commercial, and industrial settings.

## Fire Hydrant System

## Engineer and Technical Person:

O2

WE have a good team of technical knowledge and trained person both home and abroad.

## Tools and Equipment:

O3

All most tools & equipment are modern. We can't compromise with safety and quality.

## After Sale Service:

O4

We are committed to give service as per needed.  
We have a best service team in all time.

# Vision & Mission

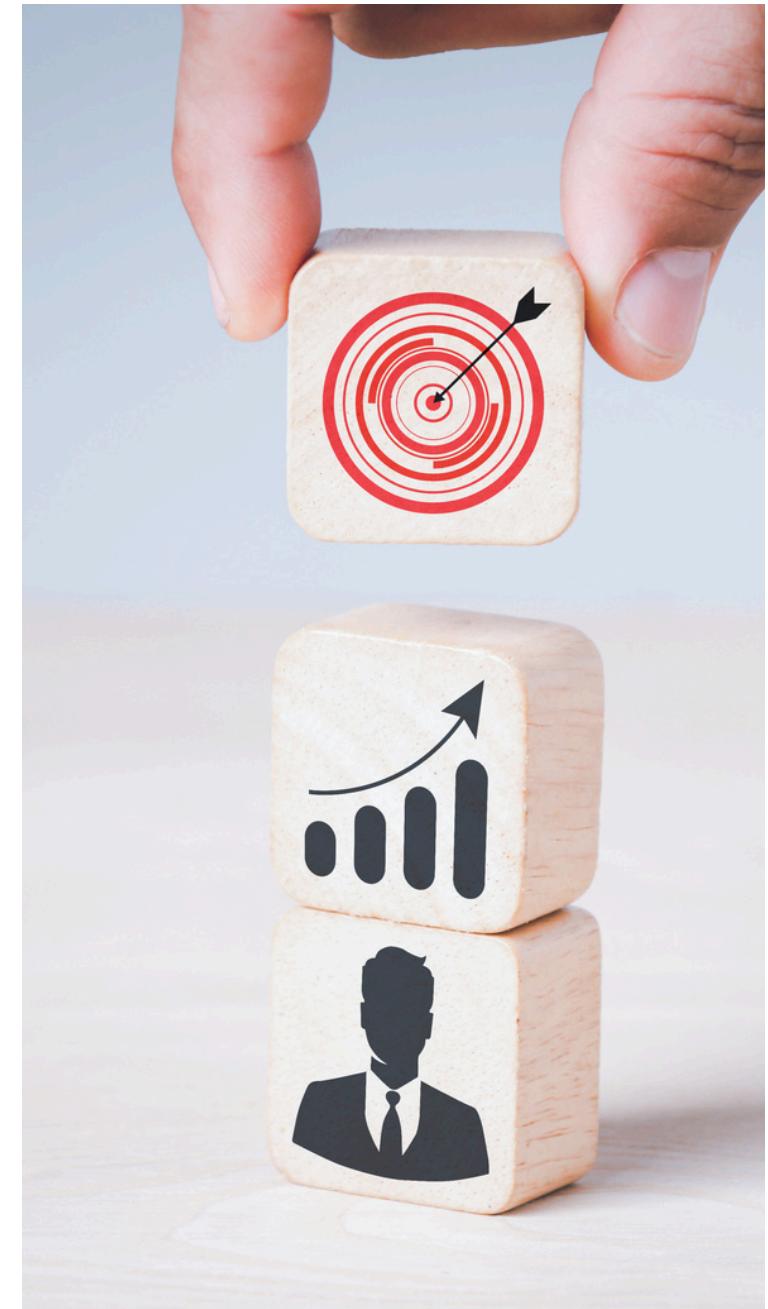

## Vision

- Mukti Power Private Ltd has a vision to look forward and to supply high quality with low cost.

## Mission

- Mukti Power Private Ltd has want to achieve the goals & target with a commitment of supply modern machinery and good management.

# THANK YOU

*Good service is the goal*
